DQ SOLAR ENERGY

- Overview of Project
 - The purpose and background are well defined

Steve's graduate from finance degree and Steve's parents are going to be their first client, they are passionate in green energy and they want to invest in dq solar energy, Steve needs to analyze the green energy stocks, he created an excel file to access all the data. He wants to used VBA to analyze. Steve wants to find the total daily volume and yearly return for each stock. The parents of Steve want to know how actively DQ was traded in 2018, because they believe that if a stock is traded often, the price will reflect the value of the stock.

The analysis

I start the code mentioning that the data is going to show in the worksheet "All Stock Analysis Refactored" but is going to be refactored.

Sub AllStocksAnalysisRefactored()

I did activate the code with Dim "starting time and ending time".

2. Dim startTime As Single Dim endTime As Single

I did activate the "input box" to show which year I need to run the analysis on.

3. yearvalue = InputBox("What year would you like to run the analysis on?")

I did activate the worksheet "All stocks analysis" worksheet. And mentioned that in the cell A1 is going to show "the year" of all stocks I pick to run on the analysis.

```
4. Worksheets ("All Stocks Analysis"). Activate5. Range("A1"). Value = "All Stocks (" + yearvalue + ")"
```

I started mentioning the values to print in the columns 1,2,3 of the row 3 from the "all stocks analysis "worksheet.

6. Cells(3, 1).Value = "Tickers"
Cells(3, 2).Value = "Total Daily Volume"
Cells(3, 3).Value = "Return"

```
'Initialize array of all tickers
                                   Dim tickers(12) As String
                                   tickers(0) = "AY"
                                   tickers(1) = "CSIQ"
                                   tickers(2) = "DQ"
Properties - Module5
                     X
                                   tickers(3) = "ENPH"
Module5 Module
                                    tickers(4) = "FSLR"
                                   tickers(5) =
                                                  "HASI"
Alphabetic Categorized
(Name) Module5
                                   tickers(7) = "RUN"
                                   tickers(8) = "SEDG"
                                   tickers(9) = "SPWR"
tickers(10) = "TERP"
                                   tickers(11) = "VSLR"
                                    this are all indexing the tickers array
                                   Worksheets (yearvalue) . Activate
```

I started mentioning the values to print the tickers, in total 12, starting from the value (0) until the value (11) in the "All stocks analysis" worksheet.

7. Dim tickers(12) As String

```
tickers(0) = "AY"
tickers(1) = "CSIQ"
tickers(2) = "DQ"
tickers(3) = "ENPH"
tickers(4) = "FSLR"
tickers(5) = "HASI"
tickers(6) = "JKS"
tickers(7) = "RUN"
tickers(8) = "SEDG"
tickers(9) = "SPWR"
tickers(10) = "TERP"
tickers(11) = "VSLR"
```

I did activate the year value "worksheet" to be able to pick the year from the 2017 and 2018 worksheet.

8. Worksheets(yearvalue). Activate

```
Sheet2 (2018)
                                     'Get the number of rows to loop over
RowCount = Cells(Rows.Count, "A").End(xlUp).Row
         ■ Sheet3 (DOAnalysis
         Sheet4 (All Stocks A
        Sheet5 (formatAllSt
                                     'la) Create a ticker Index
                                     Dim tickerindex As Long
    ■ ● Modules
        Module 1
                                     tickerindex = 0
        Module2
Module3
                                      'lb) Create three output arrays
                                      Dim tickervolumes(12) As Double
        Module4
                                     Dim tickerstartingprices(12) As Single
Dim tickerendingprices(12) As Single
                                     ''2a) Create a for loop to initialize the tickerVolumes to zero.
                                     For i = 0 To 11
                                        tickervolumes(i) = 0
Properties - Module5
                                    '2b) Loop over all the rows in the spreadsheet.
Module5 Module
                                    'Worksheets(yearvalue).Activate
Alphabetic Categorized
(Name) Module5
                                     For i = 2 To RowCount
```

I did activate the option to get the number of rows to loop over

9. RowCount = Cells(Rows.Count, "A").End(xIUp).Row

I Created a ticker Index that will start from "Zero."

10. Dim tickerindex As Long tickerindex = 0

I Created three output arrays: Ticker volumes, Ticker starting prices and Ticker ending prices and also I created a for loop to initialize the ticker Volumes from zero to 12.

- Dim tickervolumes(12) As Double
 Dim tickerstartingprices(12) As Single
 Dim tickerendingprices(12) As Single
- 12. For i = 0 To 11 tickervolumes(i) = 0

I did created a loop over all the rows in the spreadsheet.

13. 'Worksheets(yearvalue).Activate For i = 2 To RowCount

```

                                                 Module4
Module5
                                                                                                                                                                                                                                                                           tickerendingprices(tickerindex) = Cells(i, 6).Value
                                                                                                                                                                                                                                                                           tickerindex = tickerindex + 1
                                                                                                                                                                                                                   Next i
```

I did create a code to increase volume for current ticker and also a conditional for ticker volumes, ticker starting prices and ticker ending prices.

- 14. tickervolumes(tickerindex) = tickervolumes(tickerindex) + Cells(i, 8).Value
 - 15. If Cells(i 1, 1).Value <> tickers(tickerindex) And Cells(i, 1).Value = tickers(tickerindex) Then tickerstartingprices(tickerindex) = Cells(i, 6).Value

If Cells(i + 1, 1).Value <> tickers(tickerindex) And Cells(i, 1).Value = tickers(tickerindex) Then tickerendingprices(tickerindex) = Cells(i, 6).Value

16. tickerindex = tickerindex + 1

```
'4) Loop through your arrays to output the Ticker, Total Daily Volume, and Return.

For i = 0 To 11

Worksheets("All Stocks Analysis").Activate
Cells(4 + i, 1).Value = tickers(i)
Cells(4 + i, 2).Value = tickervolumes(i)
Cells(4 + i, 3).Value = tickerendingprices(i) / tickerstartingprices(i) - 1

'Formatting
Worksheets("All Stocks Analysis").Activate
Range("A3:C3").Font.FontStyle = "Bold"
Range("A3:C3").Borders(xlEdgeBottom).LineStyle = xlContinuous
Range("B4:B15").NumberFormat = "$,$$0"
Range("C4:C15").NumberFormat = "0.0%"
Columns("B").AutoFit
```

I did create a loop through your arrays to output the Ticker, Total Daily Volume, and Return.

```
17. For i = 0 To 11
Worksheets("All Stocks Analysis").Activate
Cells(4 + i, 1).Value = tickers(i)
Cells(4 + i, 2).Value = tickervolumes(i)
Cells(4 + i, 3).Value = tickerendingprices(i) / tickerstartingprices(i) - 1
```

I did Formatted all the information inside the worksheet "All Stocks Analysis, that's why I had to activated first and format the font style, the line style and the fit for the columns

18. Worksheets("All Stocks Analysis").Activate
Range("A3:C3").Font.FontStyle = "Bold"
Range("A3:C3").Borders(xlEdgeBottom).LineStyle = xlContinuous
Range("B4:B15").NumberFormat = "#,##0"
Range("C4:C15").NumberFormat = "0.0%"
Columns("B").AutoFit

```
dataRowStart = 4
dataRowEnd = 15

If Cells(i + 4, 3) > 0 Then
Cells(i + 4, 3) .Interior.Color = vbGreen
Else
Cells(i + 4, 3).Interior.Color = vbRed
End If

Next i
endTime = Timer
MsgBox "This code ran in " & (endTime - startTime) & " seconds for the year " & (yearvalue)

End Sub
```

I limited the format from the data row starting at 4 and the data row ending at 15, using conditional to use the colors green and red.

19

dataRowStart = 4 dataRowEnd = 15

Cells(i + 4, 3).Interior.Color = vbRed Fnd If

I did activate the "Msg Box" to show which year I pick to run the analysis on and how many seconds it took to analyze

20. endTime = Timer

MsgBox "This code ran in " & (endTime - startTime) & " seconds for the year " & (yearvalue)

Advantages and disadvantages of refactoring code in general

The advantage is when the code es refactored, is easier to understand and that gives more options to the code to add other functions. The disadvantage is that if one mistake is made while refactoring it will take more time solving the problem.

Advantages and disadvantages of the original and refactored VBA script

Both have a clear goal to arrive, but the refactored it was more easier to read and more order.
